2.4 SIGNAL SPECIFICATIONS	3

1. INTRODUCTION

The SCB 9301 is a small optically isolated 16-channel signal conditioning board used to route signals from front panel SCSI connectors to Industry Pack I/O in the IOC 9010 and VME64X VTB 8307 Mixed Signal Transition Board. Sixteen pairs of circuits are isolated together with two input strobes and two output strobes. All circuit pairs are current limited to 4.7mA and protected from over-voltage by zener diodes. A power connector accepts isolated +/-12V power from the main board and routes it to pins 49 and 50 on the SCSI connector.

2. PRODUCT SPECIFICATIONS

2.1 Power Requirements

+/-12V is accepted from main-board mounted DC-DC converters for routing to the main unit SCSI connector.

2.2 Operating Temperature Range

0 to +45 deg Celsius ambient.

2.3 Mechanical

Printed circuit board with two 50-way sockets PL1, PL2 and 6 way power plug PL3 (+5V, +/-12V and GND)

Board Dimensions: 2.55 x 1.80 inches

2.4 Signal Specifications

Digital Inputs (16)

PL2/1 to PL2/32 are arranged in pairs

PL2/1 to PL2/2 has a 4.7mA current diode in series with an opto-coupler input photodiode

PL1/1 is the photo-transistor collector output with 10K pull-up resistor to +5V

PL1/2 is the photo-transistor emitter output connected to GND

Hence PL2/1 and PL2/2 form a current circuit which saturates the output transistor when current flows

This circuit is repeated 16 times for compatibility with the 8001 and 8505

Strobe Inputs (2)

PL2/33 and PL2/34, PL2/39 and PL2/40 are arranged in pairs

PL2/33 to PL2/34 has a 4.7mA current diode in series with an opto-coupler photodiode

PL1/33 is the opto-coupler photo-transistor collector output with 10K pull-up resistor to +5V

PL1/34 is the opto-coupler photo-transistor emitter output connected to GND

Hence PL2/33 and PL2/34 form a current circuit which saturates the output transistor when current flows

This circuit is repeated for pins 39 and 40

Strobe Outputs (2)

PL2/35 and PL2/36, PL2/37 and PL2/38 are arranged in pairs

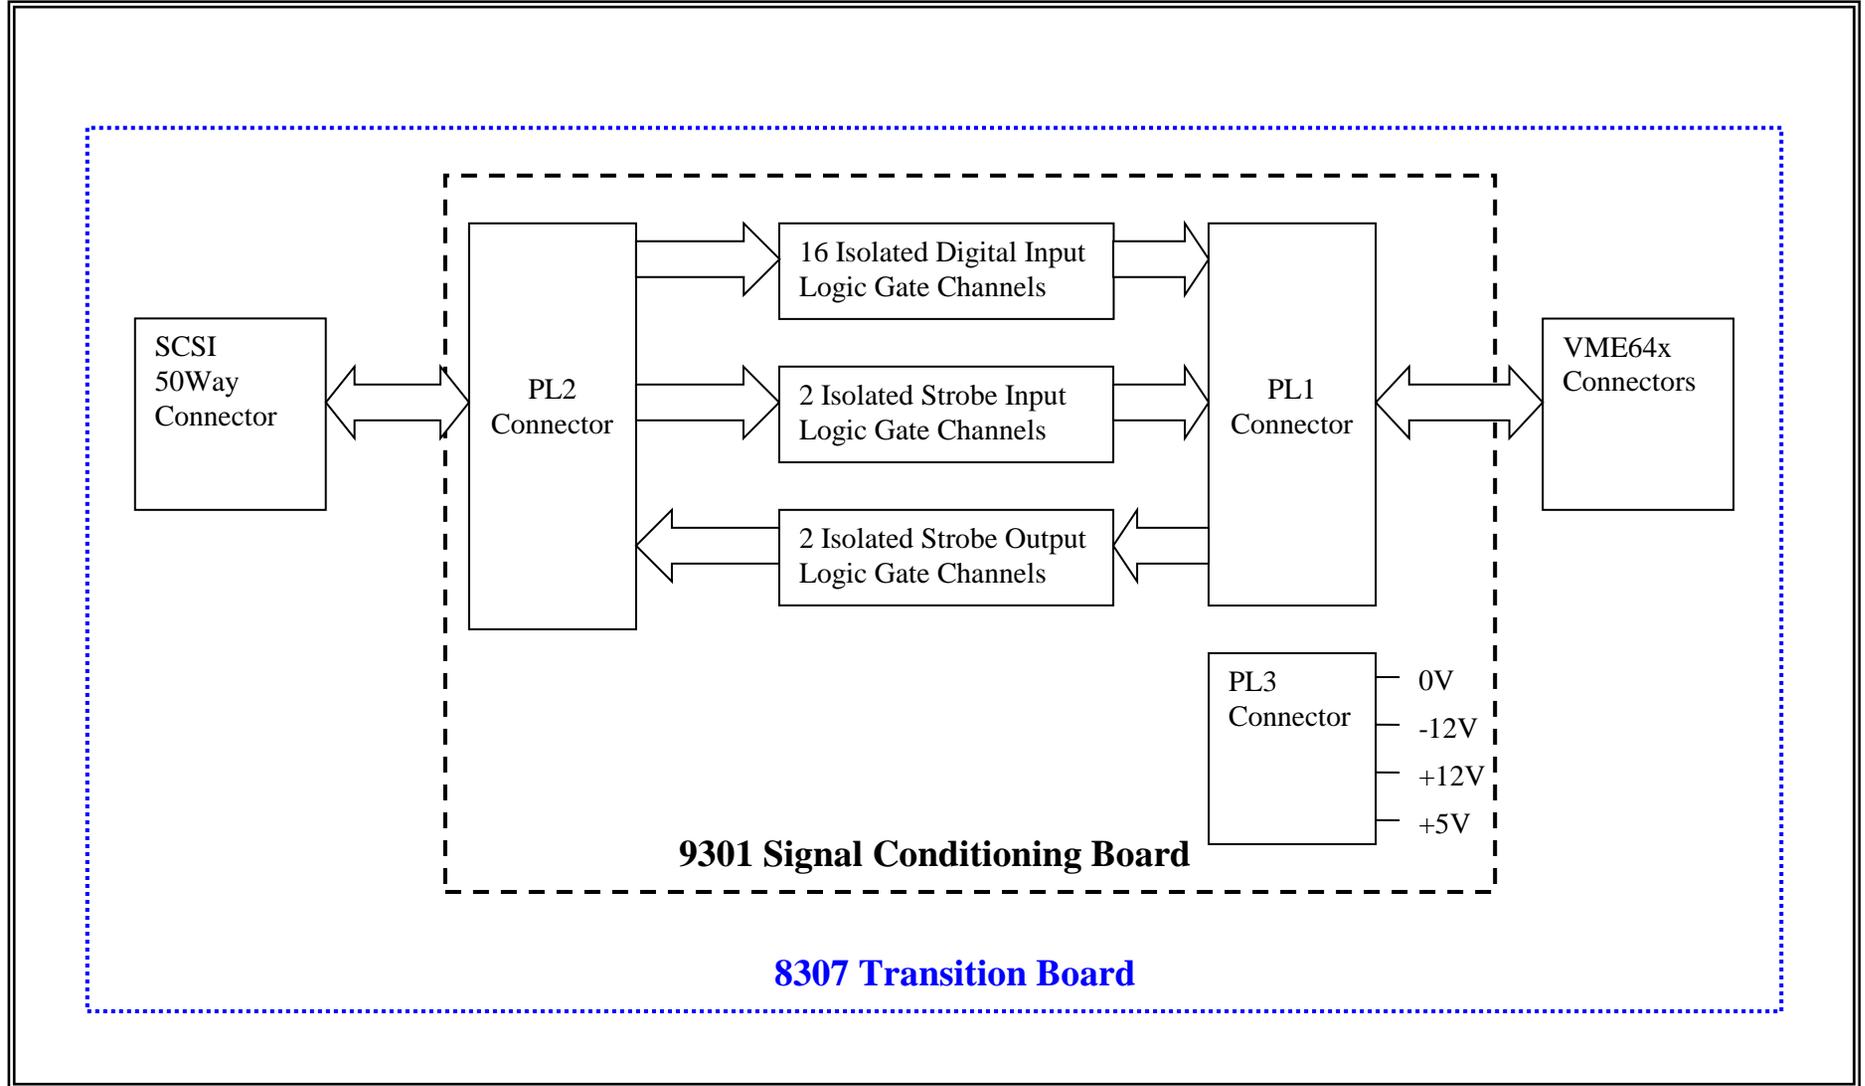

PL2/35 is the opto-coupler photo-transistor collector output

PL2/36 is the opto-coupler photo-transistor emitter output

PL1/35 is the cathode of a photodiode which has its anode pulled up to +5V via 270 ohms

When PL1/35 is switched low, current flows in the photodiode and the output phototransistor conducts

This circuit is repeated for pins 37 and 38

Block Diagram Example of connections between the 8307 transition card and 9301 SCB module

Table1 of Signal Allocation PL1
